Logistics built by the company that runs it.

RUNIC is a full-service logistics partner that runs 3PL fulfillment, freight brokerage, and logistics software development under one team. Instead of splitting the work across separate vendors, we deliver an experience connected by a single operating system.

Based at the K-One Gimpo Logis complex, we serve as the back office for e-commerce, manufacturing, and distribution brands, supporting transparent and reliable operations through field-proven standard procedures and our own in-house systems. Because we operate our own freight brokerage, storage, shipping, and delivery connect in one stop, with no need to source a separate carrier.

RUNIC's direction is to be the fastest-feedback logistics partner, where each day's operating data drives the next day's system improvements.

With a **single-SPOC model where one dedicated manager takes ownership**, our average response time across KakaoTalk, email, and phone is **within 5 minutes**. We are the partner with the fastest decision-making and issue response.

RESPONSE TIME

Within 5 min avg.

Single dedicated SPOC
KakaoTalk · Email · Phone

K-ONE GIMPO LOGIS · 4F

One team, three business lines

RUNIC delivers an experience connected by a single operating system, not by separate partners. Because the same team owns storage, transport, and systems, communication overhead is eliminated.

01 · FULFILLMENT

3PL Fulfillment

Full-cycle operations from our Gimpo center: storage, picking, packing, shipping, CS, and returns.

02 · FREIGHT

Freight Brokerage

From motorcycle courier to 25-ton wing-body trucks, with nationwide instant dispatch and a transparent rate structure.

03 · SOFTWARE

Logistics Software

In-house WMS and TMS development and operation. Field-tailored SI and automated data integration.

• SERVICE 01

3PL Fulfillment

We become your brand's back office, covering everything from inbound receiving and storage to picking, packing, shipping, CS, and returns. Our in-house WMS and experienced operations team maintain consistent shipping quality.

- 4th floor of K-One Gimpo Logis · approx. 3,000 pyeong (about 9,900 m²) of operating space
- Dedicated site with direct berthing for 25-ton wing-body trucks and rooftop parking
- In-house WMS with real-time inventory and shipment tracking, plus API integration
- AI autonomous cleaning robot running 24 hours to keep the shipping environment clean
- Custom operating SOPs designed for e-commerce, manufacturing, and distribution
- Dedicated handling of returns, repackaging, and QC processes

Verified Shipping & Returns Management System

RUNIC runs shipping and returns on **systems we built in-house**. Invoices and products are matched 1:1 by barcode on the way out, and incoming returns are automatically collected and tracked. Both systems are **provided free of charge** to the shippers who work with RUNIC.

VERIFIED SHIPPING

Verified Shipping

Every shipment must pass a 1:1 invoice-to-product barcode verification before it is sealed. B2C seller shipments, B2B account deliveries, and home-shopping parcels all follow the same verification standard.

- Scan invoice → scan product barcode; ships only when the 1:1 match is complete
- Two-stage verification gates for picking and packing block mis-shipments
- Vehicle-loading verification — real-time count against required quantities
- Quantity adjustment and count reset are restricted to administrator privileges
- Voice prompts plus visual cues give workers instant feedback
- Maintains a shipping accuracy standard of 99.9%

RETURNS MANAGEMENT

Returns Management System

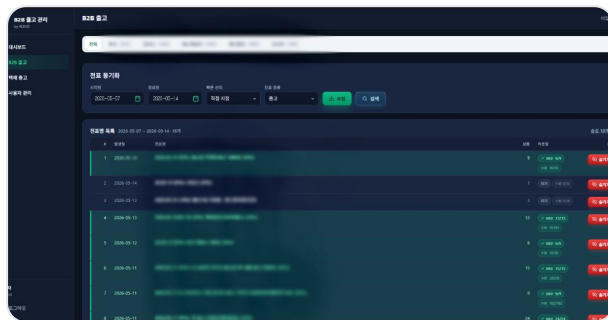

A shipper-dedicated platform that automatically collects and tracks returns coming back through the courier, and unifies verification and inventory sorting. Shippers query the data directly.

- 100% automated collection of CJ return waybills · eliminates human error
- Real-time tracking per return waybill — the full path from pickup to inbound to restock
- Original-waybill scan matching — inbound is credited only on actual arrival
- Instant lookup of the storage location for each returned item
- Automatic statistics on returns by reason, channel, and season
- Instant CS answers · free for shippers · customization also free

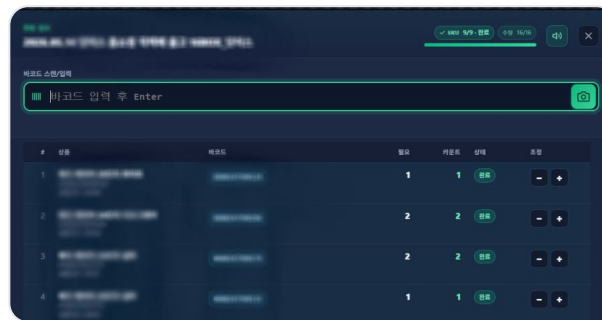

Verification & Returns System Screens

Actual screens from the verified-shipping and returns-management systems that RUNIC built in-house and runs on the floor every day. (Data has been redacted.)

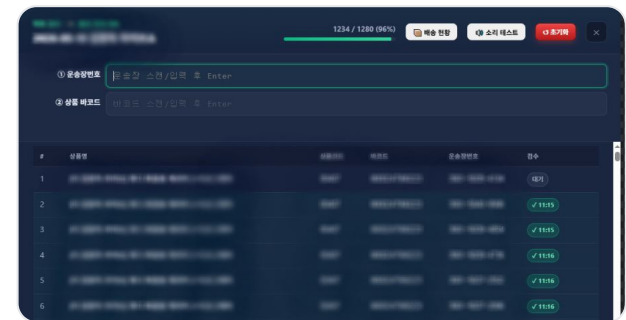

VERIFIED SHIPPING · Verified Shipping

Automated order collection · SKU counting

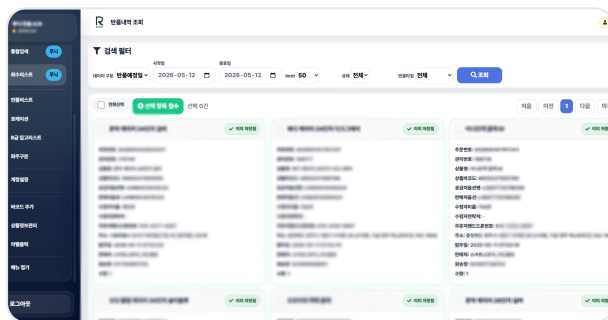

Vehicle-loading verification · real-time count

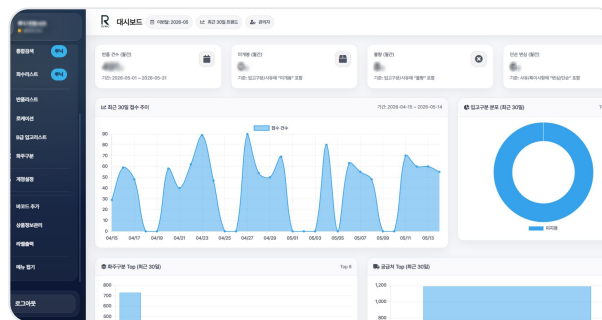

Home-shopping parcel verification · invoice-to-barcode 1:1

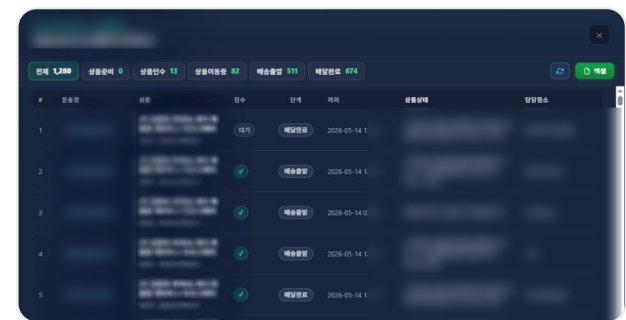

RETURNS MANAGEMENT · Returns Management

Unified returns intake · line-item separation

Returns data statistics · reason & channel analysis

Delivery tracking lookup · identifies misses and delays

Freight Brokerage

As a government-licensed freight broker (MOLIT freight brokerage permit), we connect directly to a nationwide freight network. We run vehicle sourcing, dispatch, and rate settlement reliably.

- Every vehicle type, from motorcycle and small courier to 25-ton wing-body trucks
- Nationwide instant dispatch (Seoul metro · Yeongnam · Honam · Gangwon)
- Full range of vehicle types: cargo, box truck, wing-body, lift, and more
- Handles scheduled, ad-hoc, and urgent freight alike
- Transparent rate and settlement process (automatic statement issuance)
- Single-SPOC operation across 3PL shipping and transport

• SERVICE 03

Logistics Software Development

Built by the people who use it on the floor. Beyond the WMS and TMS that RUNIC operates and has proven in the field, we also deliver workflow-automation SI for our clients.

- In-house WMS (warehouse management) and TMS (transport management) development and operation
- Integration with e-commerce channels, ERP, and online-store APIs
- On-floor workflow automation · barcode/RFID · admin dashboards
- Data analytics · performance reports · KPI monitoring
- Support for both SaaS and on-premise installations

Four reasons to choose RUNIC

Logistics is ultimately made by people and systems. RUNIC designs and operates both of them directly.

01

Proven operational trust

Field-built standard operating procedures and QA processes maintain a shipping accuracy of 99.9%.

02

In-house technology stack

WMS, TMS, and dashboards all built in-house. Fast customization without relying on outside solutions.

03

Integrated in-house brokerage network

3PL fulfillment and our own freight brokerage are connected under one team, so nationwide delivery flows in one stop with no separate carrier to source.

04

Partnership built by people

A single-point operation where one manager takes ownership of storage, transport, and systems.

An operating flow in four clear stages

Complex logistics turned into a simple flow. At every stage we keep visibility and accountability clear.

01

Consultation & diagnosis

We analyze your products, shipping patterns, and system environment to design the optimal operating plan.

02

Onboarding & integration

From WMS integration and inventory migration to workflow standardization. We support the transition with no operational risk.

03

Operations & shipping

Inbound, verification, storage, picking, packing, shipping, and CS — all run transparently via a real-time dashboard.

04

Reporting & improvement

Monthly operating reports and improvement meetings let us manage KPIs together and keep optimizing.

Shipping speed built on operating infrastructure

A Seoul-metro fulfillment hub equipped with a wide spiral ramp where 25-ton wing-body trucks and 40FT containers berth directly, rooftop parking, and an **AI autonomous cleaning robot running 24 hours**. A prime location connected to Incheon Port, Gimpo Airport, and downtown Seoul within 30 minutes.

Know-how built in the field

The Korea-side logistics hub for overseas brands selling in Korea

Selling in Korea starts with inventory inside Korea. From our Gimpo center, within 30 minutes of Incheon Port and Gimpo Airport, RUNIC stores overseas brands' products, ships them individually across every channel including SmartStore, Coupang, and brand stores, and connects B2B vehicle delivery and returns intake under one team. Without setting up a local corporation, RUNIC runs the entire process of reaching Korean consumers on your behalf.

01 · STORAGE

Korea warehouse storage

Ambient storage · in-house WMS real-time inventory · Korean-label value-added work

02 · PARCEL

B2C parcel shipping

Individual shipping across every channel from a domestic sender address · barcode verification

03 · FREIGHT

B2B vehicle delivery

Directly operated freight brokerage · from courier to 25-ton wing-body, pallet-scale bulk

04 · RETURNS

Korea return address

Independent return address · intake · verification · restock · return shipment

05 · ONE TEAM

One-stop hub

Storage · shipping · delivery · returns from one team and one inventory

Have a logistics challenge? Just ask RUNIC.

Just tell us your volumes, products, and shipping patterns, and our on-site manager will personally put together a realistic proposal.
